                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        밁
                                                                                                                                                                                                                                                           The invention relates to a mutant xylanase activity (XA, endo-1,4-beta Xylanase from Bacillus circulans) protein appearing as ADI66730. Also included is a bleaching agent comprising the XA protein. The non-constitutions as compared to Bacillus circulans xylanase ADI66728. The amino acid substitutions are made at positions 26, 28, 30, 53, 58, 64, 79, 105, 142, 144, 171, 176, 180 or 182, especially at positions 28, 30, 53, or 144. The non-naturally occurring xylanase activity (XA) protein is useful for bleaching pulp in the paper and related industries, but is also useful in the food and animal feed industries. The new protein is crive at higher pH and temperature ranges than naturally occurring xylanases, simplifying incorporation of the xylanase treatment step into pulp processing, especially where the enzyme is added after hot alkali treatment. The present sequence is a xylanase from another species included for comparison.
                                                                                                     Query Match

                                                                                                                                                                     alkalophilicity, or thermostability relative to naturally occurring B. circulans xylanase, and has at least 5 amino acid substitutions. A bleaching agent comprising a modified xylanase is useful for bleaching pulp, in the bioconversion of lignocellulosic materials to fuels, for clarifying juice and wine, extracting coffee, plant oils and starch, producing food thickeners, altering texture in bakery products, e.g. improving the quality of dough, helping bread to rise and processing of wheat and corn for starch production, use as animal food additives to aid in the digestibility of feedstuffs and in the washing of super precision devices and semiconductors. The present sequence is a xylanase protein described in the exemplification of the invention
                                                                                                                                                                                                                                                                                                       Novel xylanase activity in food and animal feed
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   WO200238746-A2

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The present sequence is given in a specification relating to non naturally occurring xylanase activity (XA) proteins. The XA proteins comprise an amino acid sequence less than 97% identical to a naturally occurring Bacillus circulans xylanase. They are modified to exhibit enhanced thermophilicity, alkalophilicity or thermostability relative to the naturally occurring B. circulans xylanase. They may be used as the active compound in a bleaching agent which is used for bleaching pulp
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Non naturally occurring XA protein with enhanced thermophilicity, alkalophilicity or thermostability relative to the naturally occurring Bacillus circulans xylanase is used in an agent for bleaching pulp.

                       The present invention relates to a non-naturally occurring x activity (XA) protein comprising an amino acid sequence less identical to a naturally occurring Bacillus circulans xylana protein has been modified to exhibit enhanced thermophilicit alkalophilicity, or thermostability relative to naturally occirculans xylanase, and has at least 5 amino acid substituti bleaching agent comprising a modified xylanase is useful for pulp, in the bioconversion of lignocellulosic materials to fice clarifying juice and wine, extracting coffee, plant oils and producing food thickeners, altering texture in bakery product improving the quality of dough, helping bread to rise and production the digestibility of feedstuffs and in the washing of sup devices and semiconductors. The present sequence is a xylana classification of the invention
                                                                                                                                                                                                                                                                                           Novel xy in food
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Xylanase activity; enzyme; thermostable; xylanase; pulp liquid clarification; coffee extraction; plant oil extra starch extraction; food thickener; animal food additive;

                                                                                                                                                                                                                                                                                                                                                       xylanase from Bacillus circulans) protein appearing as mincluded is a bleaching agent comprising the XA protein. The non-
naturally occurring XA protein comprises at least four amino acid
substitutions as compared to Bacillus circulans xylanase ADI66728. The
amino acid substitutions are made at positions 26, 28, 30, 53, 58, 64,
79, 105, 142, 144, 171, 176, 180 or 182, especially at positions 28, 30,
58, or 144. The non-naturally occurring xylanase activity (XA) protein is
useful for bleaching pulp in the paper and related industries, but is
also useful in the food and animal feed industries. The new protein is
active at higher pH and temperature ranges than naturally occurring
xylanases, simplifying incorporation of the xylanase treatment step into
pulp processing, especially where the enzyme is added after hot alkali
treatment. The present sequence is a xylanase from another species
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   New mutant xylanase (XA) protein comprising at least four amino acid substitutions as compared to Bacillus circulans xylanase, useful for bleaching (paper) pulp, and in the food and animal feed industries.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         paper
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    C. carbonum xylanase

                                                                                                                                                                                                                                                                                                                         AAW60728-44 represent family 11 xylanases. The specication describes a method for modifying a Family 11 xylanase to improve its thermophilicity, alkalophilicity and or thermotolerance. This method comprises modification of amino acids 10, 27 or 29 of Trichoderma reesei xylanase II or corresponding aligned amino acids of another Family 11 xylanase, replacement of one or more amino acids sequences in the N-terminal region with corresponding aligned sequences from another Family 11 xylanase to form a chimeric xylanase and/or upstream extension of the N terminus by addition of upto 10 amino acids. The modified xylanses are useful for improving the bleachability of wood pulp by treatment at 55-75 degrees celsius and pH 7.5-9.0 for 5-180 minutes. They might also be useful as digestibility-improving animal feed additives. They might also be useful in the processing of wheat or maize for starch production
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Family 11 xylanase; improve; thermophilicity; alkalopl thermotolerance; bleach; wood pulp; processing; wheat digestibilitiy-improving animal feed additive; starch

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Total number
      Pred. No. is the number of results predicted by chance to have score greater than or equal to the score of the result being part and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               80

A;Contents: annotation; X-ray crystallography, 1.8 ang
C;Function:
A;Description: catalyzes the hydrolysis of 1,4-beta-xy
A;Pathway: xylan degradation
C;Superfamily: endo-1,4-beta-xylanase; endo-1,4-beta-x
C;Keywords: glycosidase; hydrolase; polysaccharide deg
F;12-190/Domain: endo-1,4-beta-xylanase homology <XYL>
F;86,177/Active site: Glu #status experimental
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 submitted to the Prot

xylanase 1 - fungus (Trichoderma reesei)
C; Species: Trichoderma reesei
C; Date: 19-Mar-1997 #sequence_revision 09-May-1997 #te
C; Accession: S39154
R; Toerroenen, A.; Mach, R.L.; Messner, R.; Gonzalez, R
Biotechnology 10, 1461-1465, 1992
A; Title: The two major xylanases from trichoderma rees
A; Reference number: S39154
A; Accession: S39154
A; Accession: S39154
A; Residues: preliminary
A; Molecule type: DNA
A; Residues: 1-222 < TOE>
A; Cross-references: UNIPROT: p36217; UNIPARC: UPI000042
C; Genetics:
A; Gene: xyn1
A; Introns: 90/2
C; Superfamily: endo-1, 4-beta-xylanase; endo-1, 4-beta-x
F; 44-222/Domain: endo-1, 4-beta-xylanase homology < XYL>
A; Molecule type: DNA
A; Residues: 1-223 < SAA>
A; Cross-references: UNI

A;Gene: xin2
A;Introns: 91/2
C;Function:
A;Description: catalyzes the hydrolysis of 1,4-beta-xylosidic bonds in xylosescription: catalyzes the hydrolase; polysaccharide degradation cyclosescription: glycoprotein; glycosidase; hydrolase; polysaccharide degradation figure is signal sequence #status predicted <SIG>
F;1-19/Domain: signal sequence #status predicted <SIG>
F;20-33/Domain: propeptide #status predicted <PRO>
F;34-223/Product: endo-1,4-beta-xylanase II #status experimental <MAT>
F;45-223/Domain: endo-1,4-beta-xylanase homology <XYL>
F;71,94/Binding site: carbohydrate (Asn) (covalent) #status predicted
F;110,121/Binding site: substrate (Tyr) #status predicted
F;110,210/Active site: Glu #status predicted
                                                                                                                                                                                                       A;Description: catalyzes the hydrolysis of 1,4-beta-xylosidic A;Pathway: xylan degradation C;Superfamily: endo-1,4-beta-xylanase; endo-1,4-beta-xylanase C;Keywords: glycosidase; hydrolase; polysaccharide degradation F;12-190/Domain: endo-1,4-beta-xylanase homology <XYL>F;77,88/Binding site: substrate (Tyr) #status predicted F;86,177/Active site: Glu #status predicted
